Dr. Bob Gabbay will be on the UW-Madison campus on Tuesday, October 31, 2017 to speak about:

- Why diabetes is often a target for chronic disease health care innovations
- Key factors that lead to improved diabetes care in the context of the Patient Centered Medical Home
- Innovative methods to bring together the Medical Neighborhood

Please join us for this exciting event!

Robert A. Gabbay, MD, PhD, has 35 years of clinical and research experience and is Chief Medical Officer and Senior Vice President at Joslin Diabetes Center and Associate Professor of Medicine at Harvard Medical School. His research concentrates on improving health care delivery models to enhance diabetes outcomes and patients’ experiences. This has included implementation of the Patient Centered Medical Home in primary care, where he led one of the first large medical home pilots across 150 practices and 80,000 patients with diabetes. Dr. Gabbay has received funding from NIDDK, Agency for Healthcare Research and Quality (AHRQ), and the Center for Medicare and Medicaid Innovation for his care transformation work. Interventions have included behavior change using motivational interviewing, self-management support, decision support, technology, population health and care management.

Dr. Gabbay has been invited to speak on numerous topics related to diabetes and is on the editorial board of Diabetes Technology and Therapeutics and Diabetes Forecast. He is editor-in-chief of Evidence-Based Diabetes Management and has published extensively on better approaches to manage people with diabetes.

Dr. Gabbay holds a B.Sc. degree in Biochemistry from McGill University, PhD in Biochemistry from University of Wisconsin, and MD from State University of New York (SUNY) Health Sciences Center at Brooklyn. He completed his residency at New York Hospital – Cornell and a fellowship in endocrinology, diabetes, and metabolism at a combined Harvard Medical School program.
